

Call for proposals for the Julis Romo Rabinowitz Graduate Fellowship

The Metropolis Project is soliciting proposals for the Julis Romo Rabinowitz Graduate Fellowship for future cities and technology. Post-graduates Ph.D. students are invited to apply by proposing a research project focusing on novel engineering technologies (broadly defined) that enable more resilient, sustainable, livable and equitable cities. Particularly encouraged are ideas that build on prior research by the student on the technology fundamentals and development, such that the Metropolis funding would primarily be used to support testing or implementation in the context of the built environment and urban systems.

A 2-page (maximum) description of the proposed work to be conducted, an itemized budget, a brief CV of the applicant, and a transcript should be sent by the applying student to metronews@princeton.edu by Nov 8, 2021. Please send any inquiries to the same email address. The proposal should name the main Ph.D. advisor of the student, who should be consulted about the application and who may be later asked to write a brief letter of support.

The budget request should not exceed USD 50,000, and can include tuition and stipend support, experimental equipment, and other justifiable expenses. The scope of the work should be limited to 1 year.
